

8 Day Trial

We set up some test scenarios to demonstrate what actually happens to oil and diesel when the incredible BioSok® is added to the mix. Here are the results of trial #1: fresh water and clean fuel & oil.

- Day 1**
- 1/2 Litre diesel & 1/2 Litre engine oil were added to a small glass tank filled with 6 Litres of tap water.
 - BioSok® was tethered and lowered into the tank where it floated.

- Day 2**
- Surface oil has turned a milky colour and covered the entire surface on the tank water.
 - BioSok® has absorbed oil and changed colour.

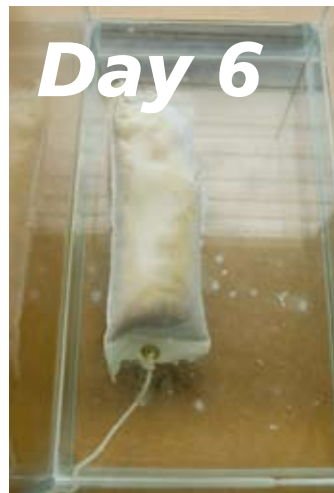

- Day 3**
- Surface oil has started to disappear
 - Co2 is evident as bubbles.

- Day 4**
- Big change today!
 - Surface oil has greatly diminished and Co2 bubbles are less present.

- Day 5**
- Surface oil is continuing to disappear and Co2 bubbles are less present.
 - Small concentrations of white, opaque oily deposits are floating on the surface.

- Day 6**
- Not a lot of difference on Day 6 but the water is definitely clearer.
 - Less concentrations of white, opaque oily deposits present on the surface.

- Day 7**
- An increase in Co2 is observed today.
 - Surface is less oily.

- Day 8**
- Surface water is becoming quite clear. Almost no fuel on the surface.
 - Small amounts of Co2 are continuing to be released.
